InfoWave Introduces Web-Based Fleet Management Solution

Singapore, April 22, 2009 – InfoWave Pte Ltd (“InfoWave”) today announced the launch of Waveon Fleet solution designed to help transport and logistics operators improve fleet utilization and efficiency, enhance driver safety, and provide measurable improvements in customer service level. The new solution is offered together with InfoWave’s range of vehicle trackers to address primarily the Asia Pacific market where there is an increasing demand for end-to-end solution offerings.

Designed to be highly flexible and scalable, the new Waveon Fleet solution can be adapted to meet the specific operational requirements of small and large fleet operators in the transport and logistics business. The solutions also provide a number of delivery and pricing options including subscription and enterprise based pricing models to offer customers choice, flexibility and value.

The new Waveon Fleet solution is a suite of web-based fleet management services that provides progressive and modular monitoring, and control tools with quick and easy implementation. The solution includes asset-location optimization tools using GPS and GPRS technologies, driver profiles using G-sensor, and remote vehicle diagnostics using CANBUS parameters.

Ideal for commercial fleets and vehicles, which provide logistic delivery, freight, towing, and other logistic services, Waveon Fleet offers fleet operators significant fuel savings of up to 16%, Mean Time Between Failure (“MTBF”) improvement up to 70%, and up to a 75% decrease in aggressive driver behaviour.

“The new Waveon Fleet solution is part of a new series of solution offerings that InfoWave provides to support our customers throughout the entire value chain from solution planning and consultation, system development and product customization, system integration and installation, to training and rollout,” said Mr. Loh Choon Seng, Managing Director of InfoWave. “The new solution also opens up new possibilities and opportunities for transport and logistics firms, both small and large, to operate cost-effective fleet management systems while offering various levels of management and control, and benefits such as better optimization of fleet resources, customer service, and safety.”

The new Waveon Fleet solution, a result of joint collaboration between InfoWave and its global strategic partner, will form the company’s complementary business, while telematics hardware development and distribution remains its core business.

Availability

Organizations seeking to implement or resell Waveon Fleet solution should contact InfoWave at sales@infowave.sg.
